FOR IMMEDIATE RELEASE

Suroda Launches Environmental Acoustic Platform for "Sick Building" and Unexplained Disturbance Investigations

Patent-pending SonicPrint™ technology turns existing phones, computers, and security cameras into environmental detection instruments—no proprietary hardware required.

BOSTON — September 23, 2026 — Suroda Inc. today announced the commencement of commercial operations and the launch of an environmental acoustic platform for investigating "sick building" concerns and unexplained disturbances in homes and workplaces. Available through its customer portal, the platform detects and documents acoustic and infrasonic signal signatures, giving investigators, legal counsel, and consumers objective data when conventional building assessments have left questions unresolved.

When conventional building assessments fail to identify the cause, investigators need another way to examine the environment. Suroda brings acoustic and optical analysis to that gap. Its patent-pending SonicPrint™ technology isolates specific signal signatures from audio and video recordings, generating timestamped reports with spectrograms, intensity metrics, and chain-of-custody records for facility, legal, or medical review.

"We set out to detect and document directed acoustic energy," said Brian Goss, founder and CEO of Suroda Inc. "As we developed the technology, we found it could help investigate a much wider range of environmental disturbances. For an investigator working on a case, or someone trying to understand what is happening in their home, we turn the recordings they already have into evidence they can examine."

Lookback Analysis for Investigators, Counsel and Consumers

Suroda's Lookback Analysis service examines existing security-camera footage, phone recordings, and other captured audio and video. Investigators and counsel can commission analysis for an active matter, while individuals can use the service directly to investigate concerns about their own environment.

Each engagement is individually scoped and quoted, with findings documented whether or not the targeted signatures are detected. No Suroda app is required. Customers can request analysis through suroda.com or by contacting sales@suroda.com.

A Scalable SaaS Platform for Any Space

The Suroda customer portal is live at portal.suroda.com, enabling customers to submit recordings and review analysis reports. Native macOS and Windows clients for on-site audio collection are available to members through the portal. Raspberry Pi and Ubuntu Linux clients are planned for release in the coming weeks. The iPhone app is currently in App Store review.

Four subscription tiers support personal recording and ongoing collection across a site:

Suroda™ San ($19.99/month; free for the first 90 days, no credit card required) — *Personal Environment Validation.* Audio recording and analysis on all Suroda apps, with a monthly recording-time limit, to document acoustic anomalies at home or while traveling, preserving findings for personal or professional review.

Suroda™ Kai ($49.99/month) — *Building Environment Validation.* Enables investigators, property owners, and operators to run automated, scheduled, or continuous audio capture across supported devices at a site.

Suroda™ Ronin ($549/month) — *Video and Audio Fusion.* Includes Kai audio capabilities and adds patent-pending analysis of existing CCTV footage delivered through FTP or API integrations, providing acoustic and visual evidence.

Suroda™ Sensei ($1,299/month) — *Enterprise Environmental Suite.* Includes Ronin and Suroda's complete acoustic and optical analysis suite for complex investigations.

Key Applications

Commercial Real Estate and Facilities. Investigate "sick building" concerns and acoustic disturbances when conventional HVAC, air-quality, and other standard testing has left questions unresolved.

Residential and Health Context. Document environmental sound signatures alongside reports of discomfort, creating a record that individuals can share with investigators or qualified health professionals.

Enterprise Security and Specialist Investigations. Examine directed acoustic events using structured logs for formal investigation.

Privacy by Design

Suroda's algorithms isolate targeted signal signatures. Speech is excluded from analysis; the platform does not transcribe conversations or identify speakers.

About Suroda

Suroda Inc. is a Delaware corporation headquartered in Boston, Massachusetts. Dedicated to environmental intelligence built on evidence, Suroda makes acoustic and infrasonic anomalies visible, corroborating environmental signals and anchoring them to reviewable evidence. Learn more at suroda.com.
